The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, memaropolesis regulating activity, issue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This cDNA clone, designated C195_1, codes for a novel secreted protein (see AAW1600) of human peripheral blood monouclear cells (PBMC). It was isolated from a PBMC cDNA ilbrary using methods which are selective for cDNAs encoding secreted proteins. The 433 be sequence represents the 5' part of the clone; the 3' portion of C195_1, including the polyA tail, is provided in AAV04275. C195_1 is deposited as ATCC 98079, a composite clone. An additional isolate of C195_1, designated C195_4 (see AAV04274), is deposited as ATCC 98192. Both sequences can be recovered using a probe (see AAV04276). The isolated nucleic acid may be used to express recombinant secreted proteins; as a tissue/molecular weight marker; for chromosome clonefication; to identify possible genetic disorders; to isolate new related DNA; as a source of PCR primers; to generate anti-protein or anti-DNA antibodies; in interaction trap assays to identify sequences that encode interacting proteins etc. The secreted proteins can be used to screen compounds for biological activity; receptors and ligands and as nutritional sources. They may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   have biological activities, e.g. cytokine, cell proliferation or differentiation activity, immunosuppressant, immunostimulant, requiation of heamatopoiesis, modulation of fertility, chemotactic, chemokinetic, haemostatic, thrombolytic, antimicrobials, analgesic, antipsoriatic, etc. No evidence is given to support any of these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid encoding secreted protein from human peripheral blood mononuclear cells - useful, e.g. as immunomodulators, antitumour agents, promoters of tissue growth, haemostatic and thrombolytic agents etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB 19; Length 433;

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polyneptides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                        Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukaemia, inflammation and immune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, tissue given. Suggested activities haematopolesis regulating activity, tissue growth activity, activity, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0

  Sequences AAS35741-AAS36842 represent genomic DNA molecules, which encode the cardiovascular system antigen polypeptides of the invention.

Cardiovascular system antigens and their associated polynocleotides are cardiovascular system antigens and their associated polynocleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmne system antigen polynucleotide. The treatable disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, viruses and fungi, ocular disorders such as correal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as glence to pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotrasis.

Cransplantation, but was obtained in electronic format directly from WIPPO correct transplantation, but was obtained in electronic format directly from WIPPO correct are from the properties of the prevent served are for this patent did not form part of the printed at free figures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chicken; sheep; immunosuppressive; antiarthritic; vascropic; dog; antirheumatic; antiproliferative; cytostatic; cardiant; neuroprotective; cerebroprotective; nootropic; antibacterial; virucide; immicrofective; corpthalmological; vulnerary; gene therapy; autoimmune disease; neoplasm; hyperproliferative disorder; breast; liver; cardiovascular disorder; descebrovascular disorder; nervous system disorder; bacterial infection; fungal infection; viral infection; ocular disorder; endocrine disorder; gastrointestinal disorder; reapliascroprisconding disorder; wound healing; skin aging; organ transplantation; tissue regeneration;

chickens or sheep. A pathological condition can be determined by chickens or sheep. A pathological condition can be determined by effecting the presence or absence of a mutation in a cardiovascular system antigen polymuclectide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neotharsms of the breast or liver, cardiovascular disorders such as cardiovascular disorders such as cardiac arrest, cardencesular disorders such as cardiac arrest, cardencesular disorders such as cerebral ischmemia, nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruseg and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as premature labour and infertility, as glomerulonephrifis and respiratory disorders such as sathma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotraxis.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/published_pot_sequences.

New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the cardiovascular system -

Claim 1; SEQ ID No 526; 674pp; English.

Sequences AAS35126-AAS35740 represent cDNA molecules, which encode the cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigens and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as

an additional isolate of clone C195\_1 (see AAV04273), deposited

```
ö
             nervous system disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as glomerulonephritis and respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate itssues and in chemotaxis.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This cDNA clone, designated C195_4, codes for a novel secreted protein (see AAW41601) of human peripheral blood mononuclear cells (PBMC). It was isolated from a PBMC cDNA library using methods which are selective for cDNAs encoding secreted proteins. The 733 bps sequence represents the internal part of the clone; the 3' portion of C195_4, including the polyA tail, is provided in AAV04278, and the 5' portion in AAV04277. C195_4 is deposited as ATCC 98192.

The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar to that for N-myc and TrkA genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; neuroblastoma; malignancy; cancer; tumour marker; N-myc; TrkA; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids originating in gene expressed in human neuroblastoma, useful as probe or primer in diagnosing prognosis of human neuroblastoma, malignancy and susceptibility indicator or tumour marker
              ARAV04776. The isolated clone acid may be used to express recombinant secreted proteins; as a tissue/molecular weight marker; for chromosome identification; to identify possible genetic disorders; to isolate related DNA; as a source of PCR primers; to generate anti-protein or anti-DNA antibodies; in interaction trap assays to identify sequences that encode interacting proteins etc. The secreted proteins can be used to screen compounds for biological activity; to raise antibodies; as tissue markers; for isolation of related receptors and ligands and as nutritional sources. They may
                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                              related receptors and ligands and as nutritional sources. They may also have biological activities, e.g. cytokine, cell proliferation or differentiation activity, immunosuppressnt, immunostimulant, regulation of haematopolesis, modulation of fertility, chemotactic, chemokinetic, haemostatic, thrombolytic, antimicrobials, analgesic, antipsoriatic, etc. No evidence is given to support any of these

The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414

Erepresent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA81260 to AAA81303 and AAA825620 to AA825650 represent Potestate DNA sequences; AAA81321 represent Potestate DNA sequences; AAA81324 to AAA81322 and AAA81321 represent Potestate DNA sequences; and AAA81322 to AAA81452 and AAA81321 represent DNA sequences; and AAA81322 to Sequences, which are all used in the exemplification of the present to invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition of the present invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition of the nucleic acid sequences, protein sequences, and antibodies of medicament) for treating preventing or diagnosing infection due to Neisserlal bacteria. For example, some of the identification of sequences and/or against all pathogenic Neissariae. Identification of sequences and/or against all pathogenic Neissariae. Identification of sequences and/or against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes, CC Particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have also been tried but none have successfully covercome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than

NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequencing vector: Plasmid; M7789

NOTE: This is a "working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

RP11-569E4 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/Dacpac/home.htm
VECTOR: pBAACe3.6
IMPORTANT: This sequence is not the entire insert of clone RP11-569E4 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true left end of clone RP11-322A14 is at 83451 in this sequence. The true right end of clone RP11-141M24 is at 100 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       / A feb. 1 / A feb. 2 / A feb. 3

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a "working draft" sequence. It currently consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Jurect Submission

Cambridgeshire, CB10 1SA, UK E-mail enquiries:
hunquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Jan 11, 2002 this sequence version replaced gi:9230935.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em1; EMBL; Sw:,
SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                              Direct Submission

Submitted (16-OCT-2000) Sanger Centre, Hinxton, Cambridgeshire,
CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk
On Oct 17, 2000 this sequence version replaced gi:10277928.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
annotated human repeat sequence elements (e.g. Alu). Where the
sequence is ambiguous, there is an annotation using the 'unsure'
means.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORWPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromsome 13, constructed by the Sanger Centre Chromosome 13 mapping Group. Furthar information can be found at http://www.sanger.ac.uk/HGP/Chr13
RP11-168G12 is from the library RPC1-11.1 constructed at the forether details see http://bacpac.med.buffalo.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human DNA sequence from clone RP11-77D6 on chromosome 9q31.1-32, Complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

NOTE: It currently consists of I contigs caps between the contigs
are represented as runs of N. The order of the pieces is believed
to be correct as given, however the sizes of the gaps between them
are based on estimates that have provided by the submitter. This
sequence will be replaced by the finished sequence as soon as it is
available and the accession number will be preserved.

* This sequence will be replaced

* NOTE: This is a 'working draft' sequence. It currently

* consists of 27 contigs. The true order of the pieces

* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequencing vector: Plasmid;
